The Manager, Book Club.

RANGOON
The Superintendent, American Baptist Mission Press.

VELLORE
Mr. A. Venkatasubban, Law Bookseller

YEOTMAL
Mr. V. N. Saraswat.

SEASON AND CROP REPORT OF THE CENTRAL PROVINCES AND BERAR FOR THE YEAR ENDING THE 31st MAY 1944

[NOTE.—Figures in brackets represent the corresponding figures of the previous year.]

1. The area to which these returns relate is 38,010,115 acres [38,002,310] in the Central Provinces and 11,378,667 acres [11,378,684] in Berar and covers all villages surveyed for land records purposes. The total provincial area shows a slight increase of 7,788 acres which calls for no explanation.

2. The monsoon of 1943 set in after the middle of June but with a feeble current till the end of that month. The rainfall was insufficient in the beginning, and regular kharif sowings could not, therefore, be taken up in time. In the first half of July, however, fairly good and well distributed rain was received throughout the province, while in the second half it was light to heavy with suitable breaks and sunshine. Sowings of paddy, cotton and groundnut were completed and those of juar, til, late kutki and kodon were in progress in some districts. Germination of all kharif crops was successful though some resowing of juar was necessary in the Jubbulpore and Hoshangabad districts on account of the damage done by caterpillars. More rain was needed in the rice tract to carry out transplantation and thinning operations successfully. During the major part of August, the monsoon except in the northern districts, was very weak, especially in Berar, and the prolonged dry weather gave cause for anxiety, particularly in respect of the kharif crops on light poor soils. The timely rainfall in the last week of August improved the outlook of the standing kharif crops for the better. Agricultural operations, which were held up, were resumed and completed. Juar and groundnut, particularly on light soils in Berar, were slightly affected as a result of continued dry weather, but the cotton crop stood the break well everywhere. In September, moderate to heavy showers of rain were received at intervals, being particularly heavy on the 17th and 18th of the month which led to floods in rivers in the Wardha, Chanda and Drug districts, and thereby caused some damage to cotton, juar and tur in the riverain villages. This rain proved very opportune and beneficial to kharif crops, particularly to cotton and paddy which then promised a yield well above the normal. Breaking up of fallow and waste lands in some districts, preparation of land for rabi sowings, intercultural operations of kharif crops and harvesting of groundnut, early millets and pulses were in progress. Light to fairly heavy showers received in the first three weeks of October caused some damage to cotton, juar and groundnut crops and also to harvested paddy lying in fields, but these provided ample moisture in the soil for rabi sowings which were carried out under favourable conditions over larger areas. Picking of cotton, harvesting of early paddy and threshing of minor kharif pulses were in progress. Sowings of rabi crops were in full swing. November and December were rainless and the standing kharif crops continued to be in a satisfactory condition. Harvesting and threshing of kharif crops were going on. The standing rabi crops were, on the whole, in good condition but winter showers were needed for their proper development, particularly for wheat and for crops on light soils. This want was filled in by light to moderate rain received in the first half of January. Except for the slight damage caused by hail to rabi pulses in places, the rabi crops were promising. Picking of cotton was nearing completion, and threshing of juar and tur was in progress. Rain followed by hail of varying intensity in February was unwelcome and damaged the standing rabi crops to a varying degree. Enquiries revealed that the

damage to the wheat crop for the whole province was to the extent of about 3 annas, while other rabi crops in the fields and on the threshing floors were also damaged but to a less extent. Garden crops were also slightly affected by rain and hail. Rust and insect pests appeared on wheat and pulses; and clear weather was needed to check their spread. But contrary to the expectations, rain and hail which fell in March were very inopportune and caused considerable damage to rabi crops in the fields and on the threshing floor. Late sown and irrigated wheat was badly hit. Rust also spread rapidly and in several places reached the ears. The grain of the late wheat was shrivelled up on account of rust while that of early wheat was blackened on account of rain. Persistence of cloudy weather intensified the caterpillar attack on gram and marred its prospects. Harvesting and threshing operations, though interrupted by rain and hail, were in progress and preparation of land for the next kharif season was taken up in the cotton and rice tracts. During the hot weather months of April and May, threshing and winnowing of rabi crops were completed and the usual summer field operations were in progress. On the whole, the season was favourable to kharif crops only, especially rice.

For the Central Provinces the total outturn of crops as given by the Deputy Commissioners, stood at 86 per cent [85 per cent] and in Berar 83 per cent [68 per cent] of the normal.

3. The areas sown with kharif or autumn crops in the Central Provinces and Berar together rose from 18,967,353 acres to 19,596,144 acres or by 3.3 per cent as compared with the previous year and 5.8 per cent as compared with the average of the last five years. Owing to favourable conditions at sowing time the area under rabi also increased from 7,906,567 acres to 8,512,671 acres or by 7.7 per cent as compared with previous year and by about 1.0 per cent with the average of the previous five years. The expansion in kharif and rabi areas is chiefly attributable to the "Grow More Food" campaign and to the high prices obtained for foodgrains. Variations in the areas under the important crops are as follows:—

(i) Rice increased by 220,366 acres or by 4 per cent.
(ii) Juar and juar-tur increased by 354,494 acres or by 6 per cent.
(iii) Cotton and its mixtures decreased by 60,980 acres or by 2 per cent.
(iv) Til (sesamum) decreased by 39,267 acres or by 9 per cent.
(v) Wheat and wheat-gram rose by 156,496 acres or by 6 per cent.
(vi) Linseed and linseed-gram increased by 109,848 acres, or by 10 per cent.
(vii) Kodon-kutki declined from 1,887,923 to 1,845,507 acres or by 2 per cent.

4. The outturns of the important kharif and rabi crops are as follows:—

Name of crop	Standard outturn per acre in lb.	Provincial outturn in annas	Provincial yield in tons
Rice ..	661 (cleaned).	13·8 [14·2]	1,829,100 [1,829,240]
Juar ..	652	11·6 [9·9]	1,330,500 [1,125,340]
Cotton ..	102 (lint).	10·1 [8·5]	636,670 bales. [550,500] bales.
Tur ..	400	11·1 [10·4]	124,000 [114,500]
Til ..	210	10·8 [10·3]	33,030 [33,3[illegible]0]
Kodon-kutki ..	520	11·7 [10·2]	188,850 [172,900]

Name of crop		Standard outturn per acre in lb.	Provincial outturn in annas.	Provincial yield in tons
Wheat	..	561	7·4 [10·6]	370,200 [510,900]
Gram	..	537	7·8 [9·4]	180,600 [180,800]
Linseed	..	219	9·6 [9·6]	79,640 [74,500]

5. *Prices.*—The prices of the principal crops ruling at harvest time at each district headquarters station in the province show that on an average the wholesale prices of rice, juar and til rose by 21, 7 and 17 per cent, respectively, while those of wheat, gram and linseed declined by 7, 4 and 25 per cent when compared with the harvest prices in the previous year.

Prices of short staple cotton (kapas) ruled between Rs. 95 and Rs. 134 [between Rs. 100 and Rs. 130], of jarilla between Rs. 150 and Rs. 163 [between Rs. 128 and Rs. 158], of verum between Rs. 135 and Rs. 155 [between Rs. 120 and Rs. 143], of cambodia between Rs. 130 and Rs. 163 [between Rs. 130 and Rs. 147] per khandi. The prices of buri cotton was Rs. 167 at the Khandwa market.

6. The approximate total valuation of certain important crops, such as rice, wheat, juar, gram, til, linseed, cotton, tur, kodon-kutki and masur based on the harvest prices ruling on 28th February 1944 in the case of kharif crops and on 31st May 1944 in the case of rabi crops, is compared below with the value of these crops in the previous year and also with the total land revenue:—

Division		1942-43		1943-44	
		Value of crops	Revenue	Value of crops	Revenue
(1)		(2)	(3)	(4)	(5)
		(In lakhs of rupees.)			
Jubbulpore	..	25.47	49¾	22,79	51¼
Nagpur	..	24.90	44¼	20,31	44¼
Chhattisgarh	..	31,81	43¼	43,97	43¼
Total for Central Provinces	..	82,18	1,37¼	87,07	1,38¾
Berar	..	25,66	98¼	28,04	98½
Total for the Central Provinces and Berar.		1,07,84	2,35½	1,15,11	2,36¼

The value of all crops for the province as a whole in creased by about 7¼ crores, owing to the prevailing high prices of foodgrains.

7. *Agricultural prosperity or deterioration.*—Although conditions were not favourable for rabi crops, there was no agricultural deterioration in any part of the province. The outturn of rice was above normal and the loss to cultivators in the rabi harvest was compensated to some extent by the prevailing high prices.

8. *Condition of agricultural population.*—The condition of the agriculturists in the areas where rabi crops were badly affected by hail, insect pests and rust was ameliorated by the grant of suspension and remission in land revenue.

In other parts, particularly in the Chhattisgarh rice area, their economic condition showed great improvement and was definitely sound. The agricultural labourers had sufficient employment all through the year on very good wages.

NAGPUR:
The 16th December 1944.

B. A. BAMBAWALE,
Director of Land Records, C. P. & Berar.
